The 1992 United Nations Framework Convention on Climate Change (referred to as the UNFCCC or the Convention) provides the foundation for multilateral action to combat climate change and its impacts on humanity and ecosystems.

UNFCCC eHandbook - Startpage

To create lasting climate change mitigation, the replacement of high carbon emission intensity power sources, such as conventional fossil fuels—oil, coal, and natural gas—with low-carbon power sources is required. Fossil fuels supply humanity with the vast majority of our energy demands, and at a growing rate.

Climate change mitigation - Wikipedia

Climate change denial, or global warming denial, is part of the global warming controversy.It involves denial, dismissal, or unwarranted doubt that contradicts the scientific opinion on climate change, including the extent to which it is caused by humans, its impacts on nature and human society, or the potential of adaptation to global warming by human actions.

Climate change denial - Wikipedia

Most Americans recognize climate change, but some are still unsure about its causes. Tens of thousands of scientists in more than a hundred nations have amassed an overwhelming amount of evidence pointing to a clear conclusion: Humans are the main cause. We're the ones who burn fossil fuels and ...

Despite the importance of livestock to poor people and the magnitude of the changes that are likely to befall livestock systems, the intersection of climate change and livestock in developing countries is a relatively neglected research area.

The impacts of climate change on livestock and livestock

Building on existing agricultural practices—and not pointing fingers at farming as a climate change villain—will better address the hotly debated issue, says a University of Alberta expert.

Building on current practices best way to address climate

Oil is the dominant fuel source for transportation (Fig. 1a) with road transport accounting for 81% of total energy use by the transport sector (Fig. 1b). This dependence on fossil fuels makes transport a major contributor of greenhouse gases and is one of the few industrial sectors where emissions are still growing (WBCSD, 2001). The impact of transport on the global climate is not limited to ...
