Background. In the US, the HIV diagnostic algorithm for laboratory settings recommends the use of an HIV-1/HIV-2 differentiation supplemental assay after an initial reactive antigen/antibody (Ag/Ab) assay result.

### **Performance evaluation of the Bio-Rad Geenius HIV 1/2**

This assay is offered to provide verification of a positive HCV antibody screen obtained using the Siemens Advia Centaur HCV assay or other reagent with comparable sensitivity and specificity.

B-type natriuretic peptide (BNP), also referred to as brain natriuretic peptide, is a member of a family of structurally similar peptide hormones that includes atrial natriuretic peptide. 1 BNP is a 32-amino-acid peptide that contains a 17-amino-acid ring structure that is formed as the result of an internal disulfide bond. BNP is predominantly secreted by the ventricles of the heart in ...

A NEW HIV DIAGNOSIS IS A CALL TO ACTION: In support of the New York State Department of Health (NYSDOH) AIDS Institute's (AI) January 2018 call to action for patients newly diagnosed with HIV, this committee stresses the following: Immediate linkage to care is essential for any person diagnosed with HIV. For the person with HIV, antiretroviral therapy (ART) dramatically reduces HIV-related ...

Background. Fluoride exposure has the potential to disrupt thyroid functioning, though adequate iodine intake may mitigate this effect. This is the first population-based study to examine the impact of chronic low-level fluoride exposure on thyroid function, while considering iodine status.

### **Fluoride exposure and thyroid function among adults living**

All persons recommended for HCV screening should initially be tested for HCV antibody (); (Alter, 2003) using an assay approved by the US Food and Drug Administration (FDA).FDA-approved tests include laboratory-based assays and a point-of-care assay (ie, OraQuick HCV Rapid Antibody Test [OraSure Technologies]) ().The latter is an indirect immunoassay with a sensitivity and specificity similar ...
