1.2 Simple linear regression model. † The simple linear regression function is. $Y_i = \beta_0 + \beta_1 X_i + \epsilon_i$ (1.1) In this model β_0 , β_1 , and ϵ_i are parameters and Y_i and X_i are measured values. This is called a "first order model" because it is linear in both the parameters and the independent variable.

CHAPTER 2. Simple Linear Regression. Most of alr[Ch. 2] ts simple linear regression from a few summary statistics, and we show how to do that using R below. While this is useful for understanding how simple regression works, in practice a higher-level function will be used to t regression models.
