As discussed in Chapter 8, the real DFT can be calculated by correlating the time domain signal with sine and cosine waves (see Table 8-2). Table 12-2 shows a program to calculate the complex DFT by the same method. In an apples-to-apples comparison, this is the program that the FFT improves upon.

In computational biology, protein pK a calculations are used to estimate the pK a values of amino acids as they exist within proteins. These calculations complement the pK a values reported for amino acids in their free state, and are used frequently within the fields of molecular modeling, structural bioinformatics, and computational biology

Step 1: Find the cross-sectional area within the conduit to be displaced by the three conductors:  $1.625 \text{ in.} \times 1.625 \text{ in.} \times 0.7854 \times 3 = 6.2218 \text{ in.}^2$  or  $6.222 \text{ in.}^2$  Step 2: Determine the correct conduit size to accommodate the three conductors. Table 1 allows 40 percent conduit fill for three or more conductors, and Table 4 indicates that 40 percent of trade size 5 RMC is  $8.085 \text{ in.}^2$ .

In a weighted voting body a member's power is not related to its weight in a simple way. Certainly it is not generally true that a member's power is represented by its weight: "weighted voting doesn't work" in the words of a well known journal article on the topic (Banzhaf 1965; see the bibliography for references.). In fact a member's power is a property of the whole voting body and depends ...
