Lewin's GENES XII - Jones & Bartlett Learning

The immune system is a host defense system comprising many biological structures and processes within an organism that protects against disease. To function properly, an immune system must detect a wide variety of agents, known as pathogens, from viruses to parasitic worms, and distinguish them from the organism's own healthy tissue. In many species, the immune system can be classified into ...

Human immunodeficiency virus infection and acquired immune deficiency syndrome (HIV/AIDS) is a spectrum of conditions caused by infection with the human immunodeficiency virus (HIV). Following initial infection, a person may not notice any symptoms or may experience a brief period of influenza-like illness. Typically, this is followed by a prolonged period with no symptoms.

This oral formula of Cistanche tubulosa extract and Reishi mushroom offers tri-mechanism immune support. Cistanche plant extract stimulates the development of naive T-cells for defending against new invaders. Reishi mushroom boosts the function of the innate immune cells, the immune system's first line defenders.
