The State of the World's Forest Genetic Resources (SOW-FGR)

A genetically modified tree (GMt, GM tree, genetically engineered tree, GE tree or transgenic tree) is a tree whose DNA has been modified using genetic engineering techniques. In most cases the aim is to introduce a novel trait to the plant which does not occur naturally within the species. Examples include resistance to certain pests, diseases, environmental conditions, and herbicide ...

Mark Wilkinson, of the Department of Zoology, The Natural History Museum, London, U.K. (marw (at) nhm.ac.uk) has produced REDCON, version 3.0, a program to implement his method of reduced consensus trees. These find a tree with possibly fewer species that satisfies a strict or a majority rule consensus criterion. REDCON reads trees in PAUP* format. It is a DOS executable, and is available at ...
