“Most of it is completely inhospitable and hostile to life” is a general objection to a general teleological argument on the cosmological level (like how the argument from bad design is an objection to a general teleological argument on the biological level).

In chemistry, Molecular orbital (MO) theory is a method for describing the electronic structure of molecules using quantum mechanics. Electrons are not assigned to individual bonds between atoms, but are treated as moving under the influence of the nuclei in the whole molecule. The spatial and energetic properties of electrons are described by quantum mechanics as molecular orbitals surround ...

Graph theory is also widely used in sociology as a way, for example, to measure actors' prestige or to explore rumor spreading, notably through the use of social network analysis software. Under the umbrella of social networks are many different types of graphs. Acquaintanceship and friendship graphs describe whether people know each other.

where  $T = [t_1, \dots, t_N]$  T.. Remark 2. As shown in Theorem 2.1, in theory this algorithm works for any infinitely differential activation function  $g(x)$ . Such activation functions include the sigmoidal functions as well as the radial basis, sine, cosine, exponential, and many nonregular functions as shown in Huang and Babri. According to Theorem 2.2, the upper bound of the required number of ...
