A robot is a machine—especially one programmable by a computer— capable of carrying out a complex series of actions automatically. Robots can be guided by an external control device or the control may be embedded within. Robots may be constructed to take on human form but most robots are machines designed to perform a task with no regard to how they look.

Houthakker showed that these equations combined with a Pareto density function  $g$  lead to an aggregate production function that is Cobb–Douglas in form, while Levhari started from a CES production function and worked backwards to derive the underlying density function  $g$  giving rise to the CES form. It is a remarkable fact that almost any PDF  $g$  can be used to derive a corresponding production ...

1. Introduction. Understanding large scale sectoral reallocation is essential for identifying the factors of technological change and growth (Baumol, 1967, Kuznets, 1973), such as the decline in the agricultural employment share (Gollin et al., 2002), the rise of the service economy (Buera, Kaboski, 2012, Buera, Kaboski, Rogerson), and the rise in job polarization (Barany and Siegel, 2018).
